Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1 and 3-5 are rejected under 35 U.S.C. 102(b) as being anticipated by Rothman (Current Opinion in Pediatrics: 1995, 7:415-422). Rothman discloses a method for the treatment of epidermal lesions with liquid nitrogen therapy, comprising the steps of:

administering liquid nitrogen to the epidermal lesion (wart); and

applying a topical anesthetic (EMLA) to the epidermal lesion and the surrounding epidermis following the administration of the liquid nitrogen; wherein the step of applying the topical anesthetic occurs after the thawing of the epidermal lesion;

further comprising the step of inherently relieving the pain associated with the thawing of the epidermal lesion; and wherein the relief of pain inherently occurs in about fifteen seconds following application of the topical anesthetic (see attached paragraph of the cited reference above).

Note: SMLA cream is well known as an Eutectic Mixture of Local Anesthetics such as lidocaine and prilocaine (US patent No. 5,415,866).

Claim Rejections - 35 USC § 103

Art Unit: 3739

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claim 2 is rejected under 35 U.S.C. 103(a) as being unpatentable over Rothman.

Rothman discloses the LN₂ is painful on application and stings for about 5 minutes (implies no anesthetic is applied). Then the suggestion of applying the EMLA cream to reduce the pain would obviously be to apply the cream as quickly as possible, resulting in applying the cream immediately after the application of the LN₂ during the thawing of the lesion.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Har-Shai et al. (6,503,246) disclose a cryoprobe and method of treating scars with LN₂, but applies the lidocaine before the insertion of the cryoprobe.
